NATIONAL INSTITUTE OF TECHNOLOGY, KURUKSHETRA

WEB TECHNOLOGIES (ITPC-33)

B. TECH (IT-5th SEM) MID SEM EXAM II

Duration -50 min **T. Marks -15**

Note: All questions are compulsory

(1)	Create a registration form that collects user data via an HTML form and validates the input on the server-side using **PHP.** The form should include the following fields: Name, Age, Email Address, Website URL, Message and the PHP script should: a) Check each field for an empty string. b) Validate the name field to accept only letters and spaces. c) Validate the age as a number within the range of 18 to 100. d) Validate the email field for a correct email format.	(5)
(2)	Write a **Perl program** that takes an input string from the user and performs the following tasks: 1) Create an array of individual characters from the input string. 2) Implement a function that counts the occurrences of a particular character within the array. 3) Utilize another function to reverse the order of the characters in the array. 4) Lastly, combine the modified array elements to form a new string and display the original string, the count of a specific character entered by the user, the reversed string, and the newly formed string. Ensure to provide prompts for user input and a clear display of each step's output in your program. Feel free to use Perl functions and appropriate variable names for readability purpose.	(4)
(3)	Write short notes on the following: (a) DTD vs XSD (b) CDATA vs PCDATA (c) HTML vs XML	(6)
